

Scooter-Lift II Vehicle Lift

- Ideal for raising and storing a fully-assembled scooter or wheelchair into the driver or passenger (sliding) side door of minivans, as well as the passenger side door of full-size vans.
- Requires very little arm strength, balance or effort to use. It's so compact that even when you use it in a minivan, there is still enough room for three passengers to sit comfortably in the rear seat. With the scooter removed, or when traveling without the scooter, entry and exit is easy since the door opening remains unobstructed.
- Features an optional installation assembly that eliminates the need to drill holes in the floor of the vehicle. This allows easier removal when it comes time to transfer the lift in and out of a minivan.
- Can be used for either three- or four-wheel scooters as well as manual-folding or power wheelchairs weighing up to 200 lbs./91k. The hand-held controller makes this lift simple and easy to use.
- Powered by your vehicle's battery and all lift operations are automatic - just help guide the scooter or wheelchair into place. Can also be used with the optional Bruno Pow'rPac.
