

VISION by Viewpoint Rear Entry

A Vision equipped minivan provides physically challenged individuals with safe and comfortable travel in a vehicle they can enter and exit with ease. Whether the wheelchair or scooter user is the driver or a passenger, Vision vehicles are available with different options and levels of automation for ease of use consistent with their physical ability.

With a manually operated hatch and a featherweight dual-fold aluminum ramp, this economical option is ideal for assisted travelers.

The fully automatic Vision conversion operates with the touch of a button, using a keyfob or handheld remote, or the dash mounted switch. The rear hatch opens, the ramp unfolds, and the vehicle lowers.

It accommodates virtually all types of scooters and wheelchairs. The fully automatic Vision conversion operates at the touch of a button: the rear hatch opens, the ramp unfolds, and the vehicle lowers. Whether traveling alone or assisted, persons with disabilities find the Vision system safer and more convenient.
